The information regarding delivery, appearance, perfomance, dimensions and weight of the vehicles correspond to the existing knowledge at the date of printing and to the European homologation regulations. These may change by the time the vehicle is purchased or delivered.

The "mass in running order" (MRO) is defined by VO (EU) 1230/2012. It refers to the basic version including basic equipment (75 kg for driver, filled diesel tank, filled water tank in driving position with 20 liters, gas in an aluminum bottle to 100 % and electrical connection cable). The "mass in running order" as well as the possible payload and the number of passengers may change due to different motorization or equipment version and by the installation of special equipment. Deviations within the scope of the factory tolerances (+/- 5%) are possible and permissible.

The technically permissible total mass and the permissible axle loads must not be exceeded. If you order your vehicle with additional equipment and/or travel with several people, you should check whether it makes sense to increase the weight of the vehicle.
