Guidance Notes

Moisture levels between 0-15% - no cause for concern, only readings of over 15% are recorded.

Moisture levels between 15-20% - may require further investigation. Compare with average readings and consider a recheck after 3 months.

Moisture levels between 20-30% - will require further investigations to look for other possible indications of water ingress. Possible resealing required to avoid further degrading.

Moisture levels 30% and above – may indicate that structural damage or deterioration is occurring. Possible resealing required to avoid further degrading followed by immediate rectification action, as necessary.

Comments and Recommendations

(This section contains a large 'SAMPLE' watermark and multiple horizontal lines for text entry.)

Please Note

We would emphasise that the above report accurately reflects the condition of your motorhome at the date stated. These readings may be subject to atmospheric conditions and the company cannot accept any liability for damp, which may become apparent at a future date.

Completed in line with the latest AWS Damp Testing Matrix and carried out in accordance with the latest AWS service technician's handbook and manufacturers guidance in relation to areas required to test.

Only the inside of the habitation unit is tested.

Personal belongings will not be removed from lockers and storage areas, which therefore, may limit the scope of the damp report.
