IMPORTANT TIPS FOR CHOOSING YOUR MOTORHOME

When buying a motorhome, camper van or urban vehicle (hereafter: motorhome), it is particularly important to choose the right layout and an appealing design. In addition, weight also plays an essential role. Family, friends, optional equipment, accessories and baggage – space must be available for all of these. At the same time, there are legal and technical limits to the configuration and load. Every motorhome is designed for a certain weight, which may not be exceeded during driving. For motorhome buyers, this raises the question: How should I configure my vehicle to accommodate passengers, baggage and accessories according to my needs without the vehicle exceeding this maximum weight? In order to make this decision easier for you, we provide you below with a few tips that are particularly important when selecting your vehicle from our portfolio:

1. The technically permissible maximum laden mass...

... is a value set by the manufacturer which the vehicle may not exceed.

Niesmann+Bischoff specifies a layout-related upper limit for the vehicle, which can vary from layout to layout (e.g. 3,500 kg, 4,400 kg). You can find the corresponding specification for each layout in the technical data.

Dimensions and weights (without accessories)		
Overall length	in mm	8,870
Overall width	in mm	2,415
Overall height	in mm	3,340
Technically permissible laden mass*	in kg	7,200 (opt.: 7,490)
Mass in running order*	in kg approx.	5,281 (5,017 - 5,540)
Manufacturer-specified mass for optional equipment*	in kg	1,705
Technically permissible towing weight/braked	in kg	3,300
Seats		

2. The mass in running order...

... consists – to put it simply – of the basic vehicle with standard equipment plus a standard weight of **75 kg for the driver**. It is legally permissible and possible for the mass in running order of your vehicle to deviate from the nominal value stated in the sales documents. **The permissible tolerance is $\pm 5\%$** . The **permissible range** in kilograms is given in **brackets** after the mass in running order. In order to provide you with full transparency regarding possible weight deviations, Niesmann+Bischoff weighs each vehicle at the end of the line and informs your trade partner of your vehicle's weighing result for forwarding to you.

Detailed explanations on the subject of mass in running order can be found in the “Legal Information” section.

Dimensions and weights (without accessories)		
Overall length	in mm	8,870
Overall width	in mm	2,415
Overall height	in mm	3,340
Technically permissible laden mass*	in kg	7,200 (opt.: 7,490)
Mass in running order*	in kg approx.	5,281 (5,017 - 5,540)
Manufacturer-specified mass for optional equipment*	in kg	1,705
Technically permissible towing weight/braked	in kg	3,300
Seats		

3. The permitted number of seats (including driver)...

... is determined by the manufacturer in what is referred to as the type-approval procedure. This results in what is referred to as the mass of the passengers. For this, a standard weight of 75 kg per passenger (without driver) is calculated.

Detailed explanations on the subject of mass of the passengers can be found in the “Legal Information” section

Manufacturer-specified mass for optional equipment*	in kg	1,705
Technically permissible towing weight/braked	in kg	3,300
Seats		
Seats fitted with 3-point safety belt*		2 (opt.: 3/4 or 5)
L-shaped sofa (length x width)	in mm	850 x 625
Seat bench (length x width)	in mm	1,215 x 625
Beds		
Overhead front bed (length x width)	in mm	1,900 x 1,400
Rear bed (length x width)	in mm	2,075 x 2,040
Filling quantities		

4. The manufacturer-specified mass for optional equipment...

... is a value set by Niesmann+Bischoff per layout for the maximum mass of optional equipment that can be ordered. This limit is intended to ensure that the **minimum pay-mass**, i.e. the legally prescribed free mass for baggage and retrofitted accessories, is actually available for the vehicle load capacity of the vehicles delivered by Niesmann+Bischoff. If, in exceptional cases, the weighing at the end of the line nevertheless shows that the actual load capacity falls short of the minimum pay-mass due to a permissible weight deviation, we will check together with your trade partner and you whether we should, for example, increase the load capacity of the vehicle, reduce the number of seats or remove optional equipment before delivering the vehicle.

Detailed explanations on the subject of the effects of the tolerances on the minimum pay-mass and the payload can be found in the “Legal Information” section.

Dimensions and weights (without accessories)		
Overall length	in mm	8,870
Overall width	in mm	2,415
Overall height	in mm	3,340
Technically permissible laden mass*	in kg	7,200 (opt.: 7,490)
Mass in running order*	in kg approx.	5,281 (5,017 - 5,540)
Manufacturer-specified mass for optional equipment*	in kg	1,705
Technically permissible towing weight/braked	in kg	3,300
Seats		

5. The additional weight of optional equipment and packages...

... increases the actual mass of the vehicle (= mass in running order plus selected optional equipment) and reduces the pay-mass. The specified value shows the additional weight compared to the standard equipment of the respective layout. The total weight of the selected packages and optional equipment must not exceed the manufacturer-specified mass for optional equipment.

Standard equipment

Chassis

- Turbo diesel engine with electronically controlled Common Rail Direct Injection
- Emission class Euro VI E with exhaust gas recirculation
- 3.0 l engine displacement, 132 kW / 180 HP, at 2,990 – 3,500 U / min, engine torque 430 Nm
- Insulated, silenced engine bonnet
- Manual 6-speed transmission
- Rear drive with traction control system (TCS)
- Rear axle with leaf suspension, transmission 4,56
- New e-VHT turbo charger
- Electrical parking brake
- ESC
- Seatbelt tensioner and seat-occupancy detection for driver and passenger
- Airbag for driver and passenger
- Pedal release system (brake pedal folds backwards in an front accident)
- Disc brakes on front and rear axle
- Electronically controlled anti-lock braking system (ABS)
- Hill holder
- Cruise control
- Vehicle battery 12 V / 110 Ah and disconnecting switch
- Smart generator 220 Ah with motorhome programming
- Service compartment on driver's side for comfortable access to the starter battery and for the diesel tank and AdBlue filler neck
- Tyres with steel wheel rims 225 / 75 R 16 and stainless steel wheel covers, with traction profile (M+S category)
- Spare tyre
- Day driving lights, rear lights and integrated contour lights in LED technology
- Halogen main headlights with optical lens, fog lamps
- Trailer socket, 13 poles, 12 V
- Left hand drive chassis

Driver's Cab

- Panoramic flush-sealed windscreen made of laminated safety glass, tinted, with sun shield
- Electrically adjustable isolation front plissé (variable sight protection and privacy function for the windscreen, can also be used as sun visor)
- Darkening pleats for driver and passenger side window
- Completely insulated driver's cab with double glazed driver and passenger window
- Laterally suspended exterior rear-view mirrors with wide angle, electrically adjustable and heatable, in the same color as the bodywork
- Engine bonnet with large opening angle and gas damper
- High-mount and front-placed original IVECO dashboard for optimum all-round vision
- Cupholder at the dashboard
- Deposit shelves for driver and passenger, cover with leather surface
- Heating convactor in the entire width behind the windscreen
- Electronic steering system
- Steering wheel adjustable in height and tilt
- Belt-integrated driver and passenger SKA comfort seat, rotatable by 180°, armrests and lateral parts in real leather
- Additional glass control panel

Bodyshell

- Clou Line Design (black painted radiator grille incl. chrome applications, flat side windows for driver and passenger, chrome decoration around the front lights and on the back)
- Outer plate smooth, stove-enamelled white
- Bodywork with black joints
- Front mask and fenders made of highly stable and corrosion-free glass fibre composite material
- Side panels including garage doors and upper floor panel made of torsion-resistant 2-sided-aluminium sandwich construction (42 mm) with styrofoam insulation (RTM)
- Completely walkable roof in sandwich construction (42 mm), torsion-resistant with styrofoam insulation (RTM), inside aluminum, outside with corrosion-free GRP coating, high strength X-treme, incl. gel coat sealing
- Aluminium roof profiles with rain water channel for reducing side panel soiling
- Connection of roof plate and front mask free of displacements prevents accumulation of rain water on the roof
- Ceiling-to-wall connections without cold bridges, by means of highly compressed PU hard profiles
- Box structure completely wood-free
- Insulated GRP rear panel, completed with 2-sided-aluminium sandwich panel
- High side skirts with insulated bus flaps in a sandwich construction (aluminium – styrofoam – ABS)
- Styrofoam insulation of the exterior flaps, with 2-sided-aluminium-sandwich
- Rear axle wheel cases insulated with expanded polypropylen
- 48 mm underfloor made of 2-sided-aluminium sandwich construction with styrofoam insulation
- High-tensile upper floor in 2-sided-aluminium sandwich construction with 42 mm thickness for a maximum torsional stiffness, thermal and acoustic insulation
- Heated and insulated double floor
- Load-through possibility in the double floor, accessible through fully insulated bus flaps on both sides
- Water and waste water tank integrated frost-proof in the double floor, easy to access
- Garage door on passenger side with low loading edge, hinges of die-cast aluminium, needle felting lining and electrical closing aid
- Spacious rear garage (approx. 4,500 l) with interior lighting, lashing rails, heating convactor and 230 V / 12 V socket
- Rear garage floor coated with highly wear-resistant dimpled membrane
- Solid bodyshell door with electric opening controlled by sensors to avoid collisions with the lateral flap, two-point locking, fly screen, clothes hooks and storage compartment
- Exterior, electrically operated double entrance step with extra wide steps, hidden behind the apron cover when closed
- Entrance step inside, illuminated and heated
- Insulated bodyshell windows, with double-glazed plastic, aluminium frame with thermal separation, with pleated darkening blind and insect protection

Living area and sleeping area

- Wear-resistant floor covering in wooden look with footfall sound insulation
- Continuous level floor from the driver's cab to the rear sleeping area
- Skylight with flyscreen and blackout pleated blind above the front bed (optional), over the couch, in the kitchen and in the rear bedroom
- Panoramic skylight (Midi-heki) in the living room
- Anthracite microfiber on the ceiling and on the skylight's frame, acoustic felt on the interior walls
- High quality seat cushions with elevated comfort thanks to a 3-layer foam concept
- Spacious drawer in the seat bench
- Flair 920: sideboard in the entrance area with foldable glass cover and practical drawers
- Sliding and folding living room table (rail system on the floor)
- TV compartment in the room divider between kitchen and couch, on left hand side
- Solid handle as entry aid
- Spacious overhead cupboards with push-to-open system (gas pressure buffers) for maximum comfort in use
- Large wardrobe with partitions
- Cupboards surface in real wood veneer
- Indirect accentuated lighting with LED-technology for the lounge area and the rear sleeping area
- Power-LED-spot-lights for front folding bed, rear bed and lounge area, partially dimmable
- Froli bed system including cold foam mattress and mattress sheet covers for the rear bedroom
- Bed access with night lighting
- Folding step with storage space and laundry compartment (removable through the garage) as well as drawers in white mat at the bed access
- Rear wall panelling in bedroom in black synthetic leather, quilted

Kitchen

- Built-in hybrid hobs, combination of gas and induction
- Two gas burners (total 2.5 KW) and one induction hob with 1.4 KW
- Single-lever mixer tap with pull-out function
- Sink with wooden cutting board
- Large kitchen drawers with pull-in mechanism
- Separate compartment for coffee machine
- Kitchen mirror
- Design shelves with glass inlay between the kitchen and the couch
- 177 l absorber refrigerator including 35 l freezer compartment, built-in behind a wooden door
- Pull-out spices cupboard opposite the kitchen unit

Bathroom and Toilet

- Separation between bath and rear bedroom with solid sliding door
- Separation between bath and living room with real glass sliding door with soft closing and push-to-open system
- Shower walls in concrete look, with illuminated niche and real glass sliding door
- Illuminated rain shower built-in in the ceiling with separate hand shower
- Shower with level-access made of mineral material
- Generously sized mirror cabinet with shelf and spacious drawers in white mat
- Single-lever mixer tap made of metal
- Cassette toilet with trolley system
- Bathroom fitted with towel rack as well as toilet paper holder and toilet brush
- Roof-light with insect screen roller blind and pleated darkening blind

Heating and Water

- Centralised, heatable water supply and disposal compartment on driver's side
- Discharge cocks for waste water / fresh water tank with large diameter (1 1/4") for a comfortable discharge
- Water connection for easy filling of the fresh water tank (connection with Gardena plug-in system)
- Openings for cleaning of both water tanks, accessible from the lounge area
- 10 l integrated warm-water heater
- Centralised boosted water supply with surge tank for a quiet and even operation of the pump
- Warm water heating (Alde 3030) for gas and electricity operation, colour touch screen panel, with 2 zone system for an individual temperature setting
- Heating circuit for rear bed area can be separately set with a thermostat
- Mono control crash sensor in gas pressure regulator

Electronics

- 150 Ah lithium battery
- Service-friendly access to the electronic system behind a perforated metal plate cladding in the garage
- 30 A charger with electronic control and battery temperature sensor
- Battery control system with protection against overload and complete discharge
- Power-down of the 12-volt electrics in case of undervoltage or overheat
- Section switch for leisure and vehicle battery
- 230 V CEE connection in the supply and disposal compartment with cable duct through the vehicle floor
- Automatic fault current circuit breaker
- Centralised control panel with digital display
- 8 x 230-V sockets
- 1 x 12-V socket and 5 x USB plugs for loading (depends on model)
- Lighting in Power-LED-Technology
- Central locking for the drawers, wardrobes and glass doors

* INFO

The specified **mass in running order** is a default value defined in the type-approval procedure. Due to manufacturing tolerances, the actual weighed mass in running order may deviate from the value stated above. Deviations of up to ± 5 % of the mass in running order are legally permissible and possible. The permissible range in kilograms is given in brackets after the mass in running order.

The **manufacturer-specified mass for optional equipment** is a calculated value for each type and layout that Niesmann+Bischoff uses to determine the maximum weight available for factory-fitted optional equipment. The limitation of optional equipment is intended to ensure that the minimum pay-mass, i.e. the legally prescribed free mass for baggage and retrofitted accessories, is actually available for the vehicle load capacity of the vehicles delivered by Niesmann+Bischoff. The real weight of your vehicle ex works can only be determined when it is weighed at the end of the line. If, in **exceptional cases**, the weighing shows that the actual load capacity falls below the minimum pay-mass despite limiting the optional equipment due to a permissible weight deviation, we will check together with your trade partner and you whether we should, for example, increase the load capacity of the vehicle, reduce the number of seats or remove optional equipment before delivering the vehicle.

The technically permissible maximum laden mass of the vehicle and **the technically permissible maximum mass on the axle** must not be exceeded.

Detailed information & explanations on the subject of weight and the configuration of the vehicle can be found in the **section Legal information**

¹⁾ The permissible total towing weight must not exceed 10,500 kg.

Packs

FSP – Flair Safety Pack

Code	Designation	Additional weight in kg*	GBP price 20% VAT incl.

** INFO

The factory installation of optional equipment increases the actual mass of the vehicle and reduces the pay-mass. The additional weight indicated for packages and optional equipment shows the additional weight compared to the standard equipment of the respective model or layout. The total weight of the selected optional equipment must not exceed the **manufacturer-specified mass for optional equipment** shown in the model overviews. This is a calculated value for each type and layout that Niesmann+Bischoff uses to determine the maximum weight available for factory-fitted optional equipment.

Detailed information and explanations on the subject of weight can be found in the **Legal information section**.

An increase of load capacity increases the manufacturer-specified mass for optional equipment. The increase results from the higher pay-mass due to the alternative chassis. The increased tare weight of the alternative chassis and, in particular, the weight for any mandatory heavier engine variants (e.g. 210 hp) must be deducted from this.

* INFO

The factory installation of optional equipment increases the actual mass of the vehicle and reduces the pay-mass. The additional weight indicated for packages and optional equipment shows the additional weight compared to the standard equipment of the respective model or layout.

* INFO

The factory installation of optional equipment increases the actual mass of the vehicle and reduces the pay-mass. The additional weight indicated for packages and optional equipment shows the additional weight compared to the standard equipment of the respective model or layout.

The total weight of the selected optional equipment must not exceed the **manufacturer-specified mass for optional equipment** shown in the model overviews. This is a calculated value for each type and layout that Niesmann+Bischoff uses to determine the maximum weight available for factory-fitted optional equipment.

Detailed information and explanations on the subject of weight can be found in the **Legal information section**.

* INFO

The factory installation of optional equipment increases the actual mass of the vehicle and reduces the pay-mass. The additional weight indicated for packages and optional equipment shows the additional weight compared to the standard equipment of the respective model or layout.

The total weight of the selected optional equipment must not exceed the **manufacturer-specified mass for optional equipment** shown in the model overviews. This is a calculated value for each type and layout that Niesmann+Bischoff uses to determine the maximum weight available for factory-fitted optional equipment.

Detailed information and explanations on the subject of weight can be found in the **Legal information section**.

LEGAL INFORMATION ON WEIGHT-RELATED INFORMATION

The weight specifications and tests for motorhomes are uniformly regulated throughout the EU in EU Implementing Regulation No. 2021/535 (until June 2022: EU Implementing Regulation No. 1230/2012). We have summarised and explained the key terms and legal requirements from this regulation for you below. Our dealers and the Niesmann+Bischoff configurator on our website offer you additional assistance in configuring your vehicle.

1. Technically permissible maximum laden mass

The technically permissible maximum laden mass of the vehicle (e.g. 3,500 kg) is a mass specification set by the manufacturer which the vehicle must not exceed. Information on the technically permissible maximum laden mass of the model you have chosen can be found in the technical data. If the vehicle exceeds the technically permissible maximum laden mass in everyday driving, this constitutes an administrative offence which may result in a fine.

2. Mass in running order

In simple terms, the mass in running order is the basic vehicle with standard equipment plus a legally fixed standard weight of 75 kg for the driver. This essentially includes the following items:

- the unladen weight of the vehicle together with the bodywork, including operating fluids such as greases, oils and coolants;
- the standard equipment, i.e. all equipment items that are included as standard in the factory-fitted scope of delivery;
- the fresh water tank filled to 100 % in driving mode (driving fill according to manufacturer's specifications; 20 litres) and an aluminium gas cylinder filled to 100 % with a weight of 16 kg;
- the fuel tank, which is 90 % full, including fuel;
- the driver, whose weight – regardless of the actual weight – is generally specified as 75 kg in accordance with EU law.

Information on the mass in running order can be found for each model in our sales documents. It is important to note that the value for mass in running order given in the sales documents is a default value determined in the type-approval procedure and verified by the authorities. It is legally permissible and possible for the mass in running order of the vehicle delivered to you to deviate from the nominal value stated in the sales documents. The legally permissible tolerance is $\pm 5\%$. In this way, the EU legislator accounts for the fact that certain fluctuations in the mass in running order occur due to variations in the weight of supplied parts as well as due to processes and weather conditions.

These weight deviations can be illustrated by means of an example calculation:

- Mass in running order acc. to sales documents: 2,850 kg
- Legally permissible tolerance of $\pm 5\%$: 142.50 kg
- Legally permissible range of mass in running order: 2,707.50 kg to 2,992.50 kg

The specific range of permissible weight deviations can be found for each model in the technical data. Niesmann+Bischoff makes great efforts to reduce weight variations to the minimum that is unavoidable for production reasons. Deviations at the upper and lower end of the range are therefore very rare; however, they cannot be completely ruled out technically, even with all optimisations. The real weight of the vehicle and compliance with the permissible tolerance is therefore checked by Niesmann+Bischoff by weighing each vehicle at the end of the line.

3. Mass of the passengers

The mass of the passengers is set a standard value of 75 kg for each seat provided by the manufacturer, regardless of the actual weight of the passengers. The mass of the driver is already included in the mass in running order (see no. 2 above) and is therefore not included again. In the case of a motorhome with four permitted seats, the mass of the passengers is therefore $3 \times 75 \text{ kg} = 225 \text{ kg}$.

4. Optional equipment and actual mass of the vehicle

Optional equipment (also: additional equipment) includes, according to the legal definition, all optional equipment parts not included in the standard equipment which are fitted to the vehicle under the responsibility of the manufacturer – i.e. ex works – and can be ordered by the customer (e.g. awning, bicycle or motorbike carrier, satellite system, solar system, oven, etc.). Information on the individual or package weights of the optional equipment that can be ordered can be found in our sales documents. Optional equipment in this sense does not include other accessories that are retrofitted by the dealer or you personally after the vehicle has been delivered ex works.

The mass of the vehicle in running order (see no. 2 above) and the mass of the optional equipment fitted to a specific vehicle at the factory are together referred to as the actual mass. You will find the corresponding information for your vehicle after handover under item 13.2 of the Certificate of Conformity (CoC). Please note that this specification also represents a standardised value. Since the mass in running order – as an element of the actual mass – is subject to a legally permissible tolerance of $\pm 5\%$ (see no. 2), the actual mass may also deviate accordingly from the stated nominal value.

5. Pay-mass and minimum pay-mass

The installation of optional equipment is also subject to technical and legal limits: Only so much optional equipment can be ordered and fitted at the factory that sufficient free weight remains for baggage and other accessories ("pay-mass") without exceeding the technically permissible maximum laden mass. The pay-mass is calculated by subtracting the mass in running order (nominal value according to sales documents, see no. 2 above) and the mass of the passengers (see no. 3 above) from the technically permissible maximum laden mass (see no. 1 above). The EU regulations stipulate a fixed minimum pay-mass for motorhomes, which must remain as a minimum for baggage or other non-factory-fitted accessories. This minimum pay-mass is calculated as follows:

Minimum pay-mass in kg $\geq 10 \cdot (n + L)$

Where: "n" is the maximum number of passengers plus the driver and "L" is the overall length of the vehicle in metres.

For a motorhome with a length of 6 m and 4 approved seats, the minimum pay-mass is therefore e.g. $10 \text{ kg} \cdot (4 + 6) = 100 \text{ kg}$.

To ensure that the minimum pay-mass is maintained, there is a maximum combination of optional equipment that can be ordered for each vehicle model. In the above example with a minimum pay-mass of 100 kg, the total mass of optional equipment for a vehicle with four permitted seats and a mass in running order of 2,850 kg should not exceed 325 kg:

- 3,500 kg technically permissible maximum laden mass
- - 2,850 kg mass in running order
- - 3*75 kg mass of the passengers
- - 100 kg minimum pay-mass
- = 325 kg maximum permissible mass of optional equipment

It is important to note that this calculation is based on the default value for mass in running order as defined in the type-approval procedure, without taking into account the permissible weight deviations for mass in running order (see no. 2 above). If the maximum permissible value for the optional equipment of (in the example) 325 kg is almost or completely exhausted, an upward weight deviation can therefore result in the minimum pay-mass of 100 kg being met mathematically using the default value for the mass in running order, although in fact there is no corresponding load capacity. Here, too, an example calculation for a vehicle with four seats, whose real weighed mass in running order is 2 % above the nominal value:

- 3,500 kg technically permissible maximum laden mass
- - 2,907 kg real weighed mass in running order (+ 2 % compared to the stated value of 2,850 kg)
- - 3*75 kg mass of the passengers
- - 325 kg optional equipment (maximum permissible value)
- = 43 kg actual load capacity (< minimum pay-mass of 100 kg)

In order to avoid such a situation, Niesmann+Bischoff further reduces the maximum permissible weight of the total optional equipment that can be ordered on a model-specific basis. The limitation of optional equipment is intended to ensure that the minimum pay-mass, i.e. the legally prescribed free mass for baggage and retrofitted accessories, is actually available for the vehicle load capacity of the vehicles delivered by Niesmann+Bischoff.

Since the weight of a specific vehicle can only be determined when it is weighed at the end of the line, in very rare cases a situation may arise in which the minimum pay-mass at the end of the line is not guaranteed, despite this limitation of optional equipment. In order to guarantee the minimum pay-mass even in these cases, Niesmann+Bischoff will check together with your trade partner and you before delivery of the vehicle whether, for example, the vehicle is loaded up, seats are reduced or optional equipment is removed.

6. Effects of tolerances of the mass in running order on the pay-mass

Regardless of the minimum pay-mass, you should note that unavoidable production-related fluctuations in the mass in running order – both upwards and downwards – have a mirror-image effect on the remaining load capacity: If you order our example vehicle (see no. 3. above), for example, with optional equipment with a total weight of 150 kg, the calculated pay-mass based on the default value for the mass in running order is 275 kg. The load capacity actually available may deviate from this value due to tolerances and may be higher or lower. If the mass in running order of your vehicle is, for example, permissibly 2 % higher than stated in the sales documents, the load capacity is reduced from 275 kg to 218 kg:

- 3,500 kg technically permissible maximum laden mass
- - 2,907 kg real weighed mass in running order (+ 2 % compared to the stated value of 2,850 kg)
- - 3*75 kg mass of the passengers
- - 150 kg optional equipment ordered for the specific vehicle
- = 218 kg actual load capacity

As a precaution to ensure that the calculated pay-mass is actually given, you should therefore take the possible and permissible tolerances for the mass in running order into account when configuring your vehicle.

We also recommend that you weigh the laden motorhome on a non-automatic scale before each journey and, taking the individual weight of the passengers into account, determine whether the technically permissible maximum laden mass and the technically permissible maximum mass on the axle are observed.

Important information

This brochure is subject to change without notice. After the copy deadline of this price list (7/2024) changes as to models and products, floor plans, technical data, equipments, etc. may have occurred. The illustrations also contain optional features, and / or accessories which are not included in the standard equipment and decoration respectively which is not included in Niesmann+Bischoff's range of supply. Descriptions may have been garbled due to graphic conversion, photographic processing or technical reasons. All data on range of supply, appearance, performance, weights and measures, as well as fuel consumption of the vehicles are in compliance with the knowledge existing at the time of the copy deadline and are valid for all purchase and licensing in the Federal Republic of Germany. Deviations of the values within a range of $\pm 5\%$ are possible. The measures of the mattress may slightly vary from the given bed measures. E. g. data on the capacity of the refrigerators refer to producer information. Prices for optional features are only valid when installed during production. In case of subsequent installation additional installation and servicing expenditures are accrued at cost. We reserve the right to change prices, construction and equipment without notice. With the issue of this brochure all previously issued information and price lists become void.
